

Introducing
LOLOZ™

Treat Your Teeth with a Tasty Treat

Imagine if candy was good for your teeth. Now you don't have to. With Loloz Lollipops & Lozenges, kids and adults can have the best of both worlds. Loloz contain Cavibloc, which according to an Oregon Health and Science University study, kills the oral bacteria that contributes to tooth decay and gum degeneration.

Using Loloz twice a day for 10 days kills 99.9% of harmful bacteria.

- For both kids and adults
- For those at risk for cavities or gum disease
- For sufferers of dry mouth
- For those avoiding alcohol containing rinses
- For everyone who cares about his/her oral health

LOLOZ™ - A Proven Aid to Optimal Oral Health

See it in action! These images are from a study at Oregon Health and Science University.* Both plates contained *S. mutans* bacterial culture, the bad bacteria associated with cavities, and underwent a 2-day incubation period. The image on the left is untreated. The image on the right contains Cavibloc.

As you see from these images, no bacteria growth was detectable in the plate treated with Cavibloc. Complete kill, not just a slowing of harmful bacteria.

Using Loloz twice a day for 10 days kills 99.9% of harmful bacteria, and was shown to have a positive effect on the oral bacteria for up to six months.*

Anti-Microbial • Non-Staining • Relieves Dry Mouth • Berry, Orange & Lemon Flavors
