

Post-Webinar Test Questions:
Dr. Jeremy Horst – Iodine Use in Caries Prevention and Management

1. Povidone-iodine (PVP-I) is:
 - a. Only available in a varnish containing iodine and fluoride
 - b. A broad-spectrum antiseptic for topical application in the treatment and prevention of wound infections
 - c. Only used in veterinary care
 - d. Never used in oral health prevention
 2. How many patients will experience fewer caries following povidone-iodine treatment?
 - a. The same
 - b. 5% less
 - c. 10% less
 - d. 33% less
 3. How long does povidone-iodine clinically lower streptococcus mutan levels?
 - a. 3 to 6 months
 - b. 2 days
 - c. 1 week
 - d. 30 minutes
 4. Contraindications for the use of povidone-iodine include:
 - a. Reactivity to iodine, usually during medical imaging
 - b. Patients with oral wounds deeper than abrasions
 - c. Patients allergic to povidone-iodine
 - d. All of the above
 5. Which CDT code is applicable to the use of povidone-iodine in oral prevention?
 - a. D1355 – caries preventive medicament application – per tooth
 - b. D9630 – drugs or medicaments dispensed in the office for home use
 - c. D4381 – Localized delivery of antimicrobial agents via a controlled release vehicle into diseased crevicular tissue – per tooth
 - d. All of the above
