

**Post-Webinar Test Questions:**

**Sue Kump, MBA, CDA, LDA, & Shelly Brown, Med, BSDH, AS, RDH, FADHA – Desiccation Technology in Dentistry: The Science and Clinical Application**

1. Periodontal disease is considered a chronic wound.
  - a. True
  - b. False
  
2. Desiccation of the periodontal pocket occurs within:
  - a. 10–30 seconds
  - b. 40–60 seconds
  - c. 2–3 minutes
  - d. Up to 3 days
  
3. When caries sounds the early alarm in the mouth, it reveals the same dietary stress that drives pancreatic exhaustion, liver overload, and brain insulin resistance.
  - a. 10–30 seconds
  - b. 24 hours
  - c. 2–3 days
  - d. They do not regenerate
  
4. The active components in desiccation shock technology are:
  - a. Antibiotics
  - b. Sulphonated phenolics
  - c. Chlorhexidine
  - d. Povidone-iodine
  
5. What is a key advantage of desiccation shock technology compared to traditional antimicrobial agents?
  - a. It relies on systemic absorption
  - b. It works independently of bacterial resistance
  - c. It permanently stains treated surfaces
  - d. It requires anesthesia for use
