

Post-Webinar Test Questions:

Dr. Norman Tinanoff – Fluoride’s Role in Post Pandemic Dentistry: Mechanism and Efficacy

1. The metabolic route of fluoride that is swallowed affects the unerupted teeth through:
 - a. Affecting metabolism of mutans streptococci
 - b. The plasma fluoride levels
 - c. The gingival crevicular fluids
 - d. Fluoride uptake in bone
2. Because young children may swallow some/all of fluoride toothpaste, you would want to control the amount of fluoride that is used for a 4-year-old to approximately.
 - a. none
 - b. smear
 - c. pea-sized
 - d. ribbon
3. The most important fluoride option for children at high-risk for dental caries is:
 - a. Fluoride supplements
 - b. Professional topical fluoride treatment yearly
 - c. Brush with toothpaste containing fluoride twice daily
 - d. Professional topical fluoride treatments twice a year
4. The fluoride component of a treatment plan for a 5-year-old at high-risk would include:
 - a. Brush teeth twice daily with “pea-sized” amount of 1,000 ppm toothpaste
 - b. Consider Silver Diamine Fluoride to arrest maxillary anterior caries
 - c. Topical fluoride varnish (2.26% F) every 3-months
 - d. All of the above
 - e. None of the above
5. Fluoride metal compounds affect dental caries by:
 - a. Antimicrobial affect
 - b. Remineralization
 - c. Improves microhardness of tooth mineral
 - d. All of the above

Name: _____ Degree: _____ Date: _____
Office Phone: _____ Email Address: _____
Office Name: _____ AGD Number: _____
Office Street Address: _____
Office City: _____ Office State: _____ Office Zip: _____

Please email your completed test to info@elevateoralcare.com for grading and recording.

An AGD Pace Completion Certificate, or corrections to the answers, are needed to obtain a passing score of 80%. This certificate will be emailed to your address above within three weeks for continuing education credit. Please call us at 877-866-9113 for any questions.
