

### Dr. Horst NSM Presentation

#### Test Questions

1. Which of the following prevents new dental caries lesions from forming?
  - a. 10% casein phosphopeptide-amorphous calcium phosphate (CPP-ACP)
  - b. Prophylactic dental cleanings (prophys)
  - c. New mothers chewing Xylitol gum 2-4 times per day to prevent caries in their newborns
  - d. Chlorhexidine gluconate
  
2. Which of the following is true regarding dental sealants? 
  - a. You must use a composite resin.
  - b. Glass ionomer sealants used to seal the pits and fissures will prevent caries in nearby proximal surfaces.
  - c. Placement of resin sealants is similar or more time efficient than placement of glass ionomer sealants.
  - d. The effect of glass ionomer sealants is dependent on the bulk of the material remaining over the pits and fissures.
  
3. What does SDF do to caries lesions?
  - a. Makes the lesion more resistant to acid demineralization
  - b. Hardens all affected and infected dentin and demineralized enamel
  - c. Kills bacteria and prevents them from re-invading the lesion
  - d. All of the above
  
4. Which of the following materials can be used to help remove SDF stains?
  - a. Hydrogen peroxide or hair dye remover for skin
  - b. Iodine or Napisan (sodium percarbonate) for cloth
  - c. Bar Keepers Friend, Mr. Clean, Bleach, or Comet for surfaces
  - d. All of the above, and a salt & water slurry for abrasion will help all of them
  
5. SDF has which of the following effects on bond strength?
  - a. Bond strength is less when SDF is placed before a total-etch composite bonding system
  - b. Bond strength is less when SDF is placed before a self-etch composite bonding system
  - c. Bond strength is decreased when SDF is used with glass ionomer cement
  - d. None of the above
